What is Prometheus?

Prometheus is an optimized molecular complex, approved by Health Canada (NPN 80066475) and a product that is currently patent pending. It contains an ideal combination rich in active ingredients and provides a large number of precursor nutrients for a regeneration at all levels.

Throughout our lives, our bodies suffer the ravages of time. Over the years, starting at adulthood, our muscular strength and mass will decrease and bone loss will lessen their strength, tendons and ligaments will repair more slowly, skin, attacked constantly by free radical oxidative processes, will gradually lose its elasticity as its network

of elastin and collagen fibers will deteriorate. Physiological changes following the accumulation of cellular and tissue damage will affect the function of various organs and systems. Prometheus was designed to fight aging at all levels, considered a progressive and irreversible process, but one that can most likely to be delayed.

Prometheus is a product which allows people to stay beautiful and healthy. It helps them keep their youthful appearance, fights the signs of physical and aesthetic aging, it will remove the monkeys aging remake the impoverished reserved collagen by time remake muscles, cartilage and joints, eliminate wrinkles and make the skin smooth and firm as in the time of our youth.

What are Prometheus's benefits and advantages?

The vast majority of products containing hydrolyzed collagen, available on the market contain, in some cases, between 0.5 and 1 gram of hydrolyzed collagen (daily dose), in other cases, although the dose of collagen is sufficient, their formula does not follow the complexity level of a synergistic components formulation. Prometheus contains 10g of hydrolyzed collagen. This dosage represents the daily intake recommended for maximum therapeutic effect as recommended by Health Canada as well as by the vast majority of researches on the subject.

We designed a product for all ages and all conditions. Our product allows the administration of varying doses: 2.5 g, 5 g or 10 g of hydrolyzed collagen, depending on the age and medical condition of the person. The active concentration of hydrolyzed collagen in synergy with other components, provides the necessary amino acids and anti-inflammatory in optimal proportions and ensures the maintenance and regeneration on the long term. And that in a 100% natural way.

Prometheus is a product that differs from other products on the market, thanks to its unique formula and composition, 100% natural (without additives or preservatives).

To ensure the stability of each of the compounds and to maintain at the same time the product bioavailability, we have created a product in powder form which allows maximum bioavailability (liquid) by dissolving.

While the great majority of liquid products (which are commercially available) have an acidic pH (2.5-3.5), our product has the ideal pH (6.6) which does not affect gastric acidity, while preserving the maximum function of hydrolyzed collagen, so sensitive to any acid or basic component.

What is the advantage of Prometheus vs synthetic products on the market?

There are two groups of synthetic products with inflammatory, non-steroidal anti-inflammatory drugs (NSAIDs) and corticosteroids.

NSAIDs are synthetic products used primarily in the treatment of joint or bone pain, as antipyretics, antiplatelet agents or analgesics. There are qualitative differences in the effects of different anti-inflammatory products. However, a person may respond better to one than the other. NSAIDs drugs have several more or less serious side effects: abdominal pain, gastrointestinal motility disorders, ulcers, perforations, gastric bleeding, etc. They also have renal effects, rarer than the gastrointestinal effects, but more important, such as functional renal failure. Skin reactions such as hives, hematological reactions such as thrombocytopenia, leukopenia and aplasia. NSAID medicines were also identified as having effects on other drugs, including the increase of free plasma fraction many drugs, reducing the effects of antihypertensive b-blockers and the list continues.

The mode of action of the second group of synthetic products, steroids, is very complex. Their effects are felt at almost every organ. After entering the cell, corticosteroids will bind directly to DNA. At the genetic heritage level, their actions are very diverse, including reduced production of inflammatory and immune factors. In the case of a long-

La Prairie, Quebec, J5R 4V3

term treatment, side effects occur systematically, for example vis-à-vis aggression stomach, thinning skin, immune system and regression of abnormal fat distribution.

The processing provided by the conventional medication, such as NSAIDs and corticosteroids targeting inflammations of various kinds, the side effects can be very large and require a reflection at the therapeutic choice.

Prometheus uses the synergy of the components with an action spectrum which covers almost all of the symptoms induced by inflammatory processes. The active ingredients present in this product have proven their effectiveness in several clinical studies and more, it does present no toxicity and side effects. Following scientific research anti-inflammatory synthetic short lasted so effective, not only that they have side effects but their long lasted administration causes deterioration at the loco motor system (bones, cartilage and joints). Our formulation is designed to prevent on a deep level and regenerates even after cessation of administration.

How to maximize the therapeutic effect of Prometheus?

For maximized therapeutic effect taking 10 grams of hydrolyzed collagen for the first 10 days (4 doses), two doses in the morning and two doses at night before lying down will help you obtain maximum efficiency. Thereafter, you can continue the same dosage for a period of six months or more, or you can reduce consumption at a dose in the morning and one dose before bed.

A continual intake of this product eliminates joint pain and regenerate the body on every level. The secret of the effectiveness of this product lies in the synergy observed between the components of the formulation. Each compound has a role that has been studied by dedicated researchers who held one objective: achieved a product that would give the best results without toxic effect.

What are Prometheus main impacts?

Prometheus is an optimized molecular complex, rich in active ingredients that provides a large number of precursor nutrients to the regeneration of the body. It is therefore an ideal combination of ingredients working in synergy to soothe and repair damaged joints in depth and on a long term, even after you stop taking the product.

Observed effects:

Effects at the articular level, muscles, bones and blood vessels

> regeneration of tissues and blood vessels; > protection against the deterioration of cartilage; > increased bone density; > improvement of physical performance and endurance; > muscle recovery; > intensifies the insulin sensitivity (decreases glucose and cholesterol); > elimination of joint inflammation; > elimination of muscle spasms; > antioxidant to fight against oxidative stress; > slowing the breakdown of muscle tissue; and > improvement of cardiac function.

Aesthetic effects

> improves hydration, elasticity and tonicity of the dermis; > improves fat burning (weight loss); > protects the skin against oxidative stress; > facilitates the healing process; > improves the health of hair and nails; > remarkable anti-wrinkle effect; > prevents collagen destruction; and > prevents and treats skin aging.

Why and when should you take Prometheus?

Prometheus is an optimized complex, with daily doses rigorously studied, rich in active ingredients which provides a vast number of precursors nutrients regeneration: joints, blood vessels, skin, bones and muscles. It can be used as a natural cleaning agent for the body after the age of 30, as much by women as by men and used as support by athletes to improve their performance, endurance and physical recovery. This formulation reduces the pain caused by osteoarthritis and joint problems, it shows a protective effect of bone mass, enabling the prevention of osteoporosis and osteoarthritis. Prometheus can also be used by athletes to improve their performance and their physical recovery. The main purpose of this is to first reduce the inflammation and then improve regeneration.

Can I take Prometheus even though I have a sensitive stomach?

According to current studies, no adverse effects were reported more neutral pH allows for gastric protection.

Are there situations in which I should avoid taking Prometheus?

No, except in cases of allergic reaction to any component.

What are the interactions with other products/drugs?

With plants or supplements and medications: None known

With drugs: Anti-inflammatory effect may be in addition to other anti-inflammatory drugs.

Recommended dose of Prometheus

We designed a product for all ages and all conditions. Our product allows the administration of varying doses of 2.5 g, 5 g or 10 g of hydrolyzed collagen, depending on your age and medical condition.

Dilute 8g (1 dose-measuring) or 16g (2 measures 2 doses) of Prometheus in a minimum of 250 ml of water or juice. The product when diluted in the liquid retains maximum 2 hours. Take two to four doses per day between meals, according to the perceived level of pain or effort perform hang your training.

We suggest taking 10 grams of hydrolyzed collagen / day for at least the first 10 days or 4 doses, two doses in the morning and two doses at night before bed, to obtain maximum efficiency. Thereafter, you can reduce consumption at a dose in the morning and one dose before bed, taking into account your age, your physical condition, your level of physical effort and your health.

The active components of Prometheus

Lysine is an integral part of tissue repair, promotes healing and the healing of the skin. Lysine has also been used to increase calcium absorption and reduce stress and anxiety so harmful to health. Lysine works by stimulating the production of collagen naturally, it helps neutralize the herpes virus that causes cold sores when the immune system is weakened. Fatigue, overwork, intensive physical exercise and affective disorders can all cause stress weakens the immune system and causes herpes rash.

Hydrolyzed Collagen. The active concentration of hydrolyzed collagen in synergy with other components, provides the necessary amino acids in optimal proportions and ensures the maintenance and regeneration of rating agency. The product contributes to the regeneration of tissues as well as blood vessels, it also allows an increased density. In addition, collagen is an essential element to the firmness of the skin, it helps to structure the dermis and supports the skin. This collagen supplement will allow

hydration and elasticity of the skin, overcoming the loss of tone of the dermis.

L-carnitine can improve exercise performance, muscle recovery and fat burning which facilitates weight loss while increasing endurance. Research has shown that L-carnitine as a food supplement intensifies the insulin sensitivity by providing beneficial results on blood lipids. By neutralizing the free radicals, L-carnitine protects the body and skin of the oxidative stress and reduces the risk of cardiovascular disease. L-carnitine also helps to reduce acne problems. L-carnitine is produced in sufficient quantities by the body, however, when our body develops during pregnancy or the amount of L-Carnitine necessary for our hosts may be greater than we produce naturally. It is therefore important to ensure that the body constantly holds a suitable concentration of L-Carnitine.

The duo, glucosamine sulfate + chondroitin sulfate, has already been proven in various clinical research, the latest being on February 2015. This study, conducted in four countries (France, Germany, Poland and Spain), specifies that a supplement combining glucosamine and chondroitin sulfate proves as effective anti-inflammatory drug nonsteroidal to reduce pain and joint swelling caused by osteoarthritis of the knee.

MSM is the natural sulfur compound which is very important for tissue, cartilage, tendons, bones. It effectively treats inflammatory disorders, arthritis problems, rheumatic diseases, back pain, muscle spasms, atherosclerosis, carpal tunnel syndrome, fibromyalgia, back pain, headaches, migraines and bursitis. MSM is also involved in the synthesis of collagène. It allows the maintenance of the integrity of the skin and facilitates the healing process. It also plays a role in the formation of keratin, which is a molecule important for healthy hair and nails. MSM is a compound that also helps fight against acne, oily skin, collagen synthesis in the skin level, helps maintain hair care.

Vitamin C, as ascorbate Ca, has an antioxidant effect and allows to fight against oxidative stress when present in articular diseases, prevents collagen destruction and aging while at the same time providing the necessary daily dose of ascorbate Ca. Vitamin C has anti-wrinkle outstanding features, it will keep the skin elasticity while allowing the regeneration of the skin tissues.

A small amount of 0.040 mg caffeine (less than a can of Coke) allows the production of a short-term energy boost effect due to its psychostimulant effect, which accelerates physical recovery after training.

Caffeine is a compound which also has an anti-aging role. His contained is rich in

polyphenols which are very good antioxidants. It also helps improve mental performance.

L'epsilon polyli-L-lysine naturally ensures the product's sterility and reinforces the therapeutic qualities of the hydrolyzed collagen.
